
Total Auto Recyclers

ENVIRONMENTAL POLICY

Total Auto Recyclers is an ELV (End of Life Vehicle) processing facility. **TAR** recovers reusable parts and recyclable materials from ELVs using industry best practices to achieve the best possible outcomes for recycling, conservation and the environment.

Policy:

Total Auto Recyclers has a commitment to manage its operations in an environmentally responsible manner. To achieve this Total Auto Recyclers strives to achieve the following:

Procedure

Conduct all operations in accordance with legislation, government policies and planning approvals.

Responsibly minimise adverse environmental effects of our activities. Prevent pollution by operating at an efficient level of performance and by balancing short term and long term costs.

Design and implement new programs and work to responsibly minimise adverse environmental effects and to maximise favourable effects where possible.

Provide information to and consider input from the community on significant environmental matters.

Work within a framework of ecologically sustainable development by using resources in a manner, which maximises their value to the community and to future generations.

Periodically review existing operations and identify opportunities to

Reduce adverse environmental effects

Improve the environment affected by the company.

Use resources more efficiently

Minimise the generation of waste products.

Implement systems to continually improve environmental management and performance.

We will set measurable goals for environmental performance and periodically review our achievements against them.
